

Windows Microsoft Project 2019 Standard 1 PC Medialess 1280 X 768 Screen Resolution

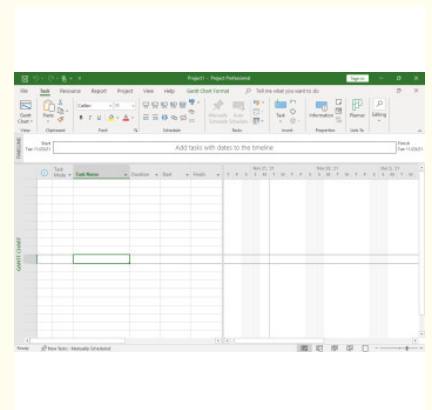

Basic Information

- Place of Origin: USA
- Brand Name: Microsoft
- Certification: Microsoft Certified
- Model Number: Project Standard 2019
- Minimum Order Quantity: 10pcs
- Price: Negotiable
- Packaging Details: Factory Sealed Retail box / OEM
- Delivery Time: 3-7 work days
- Payment Terms: T/T, Western Union, MoneyGram, Paypal, Skrill
- Supply Ability: 5000pcs/week

Product Specification

- PLATFORM SUPPORTED: Desktop / Laptop
- Sticker Only: Support
- LICENSED USE: Licensed For Home And Commercial Use
- DEVICES SUPPORTED: 1 Device
- Activation Type: Online
- System Type: Windows
- Processor: 1.6 Gigahertz (GHz)
- License Qty: 4.0 GB
- Highlight: **Windows Microsoft Project 2019 Standard, 4.0GB Microsoft Project 2019 Standard, Medialess microsoft project standard 2019**

Product Description

1280 x 768 screen resolution Microsoft Project 2019 Standard 1 PC Medialess

Microsoft Corporation

Pre-built templates help you get your project started on the right track
Sync with Project Online and Project Server
Submit timesheets to capture time spent on project and non-project work
Run what-if scenarios to make the most of your task assignments
Auto-populate start and end dates based on dependencies
Visually represent complex schedules with built-in multiple timelines
Licensed for 1 PC
Supports Long-Term Servicing Channel (LTSC) and is compatible with Office LTSC and Office 2021

Microsoft Project helps you get started quickly and execute projects with ease.

Keep your projects organized and on track

Project 2019 helps you keep your projects organized and on track with tools that make it easy to get started, quickly plan, and complete projects on time and on budget. Built-in templates and familiar scheduling tools help project managers and teams stay productive.

Effective Project planning

Familiar scheduling features like Gantt charts and prepopulated pulldown menus help reduce training time and simplify the project planning process.

Use multiple timelines

Quickly view all project activities, from tasks to upcoming milestones. Customize timelines to represent specific data and easily share them with project stakeholders.

Evaluate project proposals

Microsoft Project helps your organization capture and evaluate project ideas from anywhere within the organization, through a standardized process that feeds detailed business cases and project charters to management for review.

Optimize tasks

Visualization tools help you understand how tasks relate to one another. And by running what-if scenarios, you can make the most of your task assignments. Task path highlighting in Gantt charts helps you understand relationships among tasks and identify which are the most critical to the project's success.

Get started fast

Built-in, customizable templates use industry best practices to help you get started on the right path—so there's no need to create project plans from scratch.

Resource Management

Microsoft Project enables organizations to proactively manage resource utilization, identify bottlenecks early, accurately forecast resource needs, and improve project selection and timely delivery.

Systematic resource request

Use Resource Engagements to request and lock in resources, so your projects are always properly staffed.

Features:

The project creates budgets based on assignment work and resource rates. As resources are assigned to tasks and assignment work estimated, the program calculates the cost, equal to the work times the rate, which rolls up to the task level and then to any summary tasks and finally to the project level. Resource definitions (people, equipment and materials) can be shared between projects using a shared resource pool. Each resource can have its own calendar, which defines what days and shifts a resource is available. Resource rates are used to calculate resource assignment costs which are rolled up and summarized at the resource level. Each resource can be assigned to multiple tasks in multiple plans and each task can be assigned multiple resources, and the application schedules task work based on the resource availability as defined in the resource calendars. All resources can be defined in label without limit. Therefore, it cannot determine how many finished products can be produced with a given amount of raw materials. This makes Microsoft Project unsuitable for solving problems of available materials constrained production. Additional software is necessary to manage a complex facility that produces physical goods.

The application creates critical path schedules, and critical chain and event chain methodology third-party add-ons also are available. Schedules can be resource leveled, and chains are visualized in a Gantt chart. Additionally, Microsoft Project can recognize different classes of users. These different classes of users can have differing access levels to projects, views, and other data. Custom objects such as calendars, views, tables, filters, and fields are stored in an enterprise global which is shared by all users.

Requirements

Processor	1.6 gigahertz (GHz) or faster, 2-core
Operating system	Windows 11, Windows 10, Windows Server 2019
Memory	4 GB (64bit), 2 GB (32bit) RAM
Hard disk space	4 GB available disk space
Display	1280 x 768 screen resolution
Graphics	DirectX 10 graphics card for graphics hardware acceleration
